

Idea Bank

A website that shows student teams real problems in India and business ideas they can build to solve them.

The problem we solve

Student teams want to start something real, but most idea lists online are old, copied, or have no proof that anyone needs the product.

Idea Bank starts from real problems. Every idea comes with the evidence behind it, so a team can see who is struggling and why.

How it works

1 Collect

The site reads news, search trends, online posts and reports about problems people face in India.

2 Turn problems into ideas

Each problem becomes a business idea with a role for each type of student: computer, mechanical, electrical, civil and business.

3 Check and score

Every idea must pass four must-have rules, then gets a score out of 100.

4 Match to a team

A chatbot asks each member eight short questions, then suggests ideas that fit their skills, time and budget.

How we judge an idea

An idea is rejected if it fails any one of these four rules:

- Someone will pay for it.
- There is a clear way to earn money.
- A small team can start in under 3 months.
- There is real proof that people struggle with this problem.

Ideas that pass are scored out of 100:

PART	WHAT IT ASKS	POINTS
Need	How badly do people need this?	25
Revenue	Can it earn well?	25
Seed-ready	Can it grow and attract funding?	20
Entrepreneurial	Can a small team start it?	15
Impact	Does it help people or the planet?	15

A score of 75 or more is a strong idea. Each idea also answers six plain questions, such as "What do people do today instead?" and "What is the smallest version we can sell first?"

One example

Cool rest and water points for delivery riders

PROBLEM

Delivery workers ride through afternoon heat with no shade, water or toilets, and cannot stop without losing pay.

IDEA

Shaded rest points with chilled water and phone charging near busy pickup spots, paid for by platforms and shops.

WHO HELPS

Civil designs the shelter, mechanical the water cooler, electrical the solar power, computer the map, business the sponsors.

PROOF

News reports from 2026 on heat stress among delivery workers (links are on the idea page).

Where we are today

Ideas ready	32, across about 20 areas such as farming, health, water, waste, energy, education and elder care. 29 score 75 or more.
Proof	The 23 newest ideas each link to the news or report behind them.
Pages	Home, Why, How it works, Team chatbot, Ideas.
Live sources	Google News (30 topic searches), Google Trends, GDELT news, NewsData and Reddit.

What the site does not do

- It does not hand over a finished plan. Ideas and team roles are suggestions, and the team decides.
- It does not replace talking to customers. Every idea ends with a task such as "interview 15 shop owners".
- Prices are left blank on purpose, because they should come from the team's own research.

Limits and next steps

New ideas from live news need an AI key. Without it, the site shows the 32 researched ideas and collects news, but cannot turn that news into new ideas.

- Add the AI key so ideas refresh automatically every few hours.
- Have a person review new ideas before they go public.
- Test the site with two or three real student teams and note what they change.
